PROFESSIONAL- WORKWEAR

Engineered for Performance

2021

Providing PPE to industry for over 75 years.

Briggs Safetywear

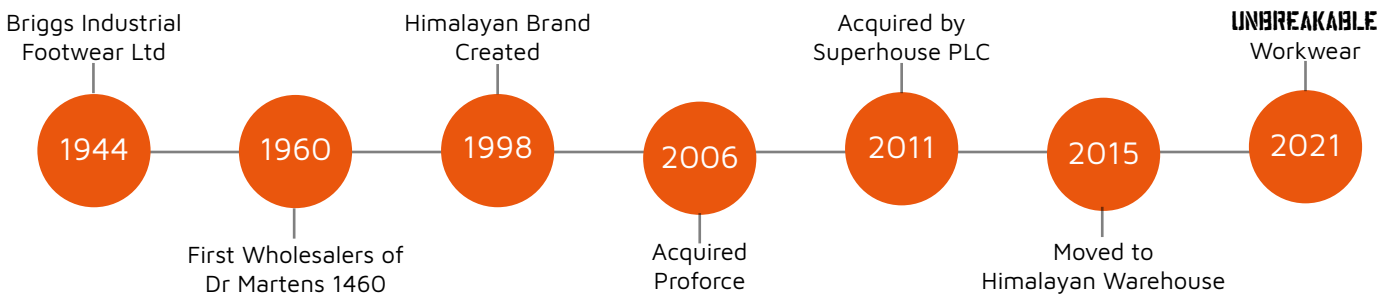

Providing PPE to industry for over 75 years.

Dating back to 1944 with over 75 years experience in PPE, Briggs continues its expansion into the Trade, Merchant and Agricultural sectors.

UNBREAKABLE Professional Workwear enters the market ensuring quality and reliability, with products made to withstand the toughest environments.

Our longevity is testament to the company's past achievements and ongoing innovation.

A long history, with a proven track record.

With significant growth in the company, Briggs was sold in 2011 to the Superhouse Group PLC.

Now part of the Superhouse Group PLC, Briggs Industrial Footwear are able to offer our in-house designed products, manufactured in our own facilities giving us overall control of design, quality control and the distribution process.

Superhouse has a Group turnover of US \$350million, with over 20 manufacturing units and over 40 years experience of producing over 5 million pairs of formal footwear for major internationally known high street brands.

The Group has a combined workforce of over 5000 and a presence in more than 35 countries offering a perfect blend of highly technical skilled staff with ISO 9002 certification.

In 2021 Briggs now launch **UNBREAKABLE** Professional Workwear for the Trade and Agricultural Sector bringing to you expertly crafted safety footwear, workwear and accessories designed and 'engineered for performance' through over 75 years of company expertise.

Look for the diamond logo on our safety footwear.

Only **UNBREAKABLE** Professional Workwear has the mark of our expertise and quality.

PROFESSIONAL WORKWEAR

UNBREAKABLE

New for 2021 comes a range of durable safety footwear and workwear products specifically designed for the professional tradesman.

With contemporary designs and state of the art materials, **UNBREAKABLE** has a product for all tradesmen.

Abrasion Resistance	3	1 to 4
Cut Resistance	1	1 to 5
Tear Resistance	4	1 to 4
Puncture Resistance	3	1 to 4

Get The Right Footwear

The choice of safety footwear depends on the type of occupational risk. As with all footwear, additional safety features may be required such as penetration resistance, electrical resistance, heat resistance etc. These shoes are marked with the relevant industrial symbols

European Standards Footwear Classification

The principal classification of footwear is based on the level of protection offered by the footwear. The table below explains the standards in detail.

EN ISO 20345

Safety Footwear. Highest protection. Toecaps tested to 200 joules for S classification.

Basic safety protection. 200 joule.

Toecap (200J protection) in either steel or composite variants.

200 joule toecap protection. Closed seat region (fully enclosed heel). Antistatic properties. Energy absorption of seat region.

Heat resistant outsole up to 300°C.

Depending on the test conditions chosen, footwear tested according to the EN standards is now marked with the one of the following codes, SRA, SRB, SRC.

200 joule toecap protection. Closed seat region (fully enclosed heel). Antistatic properties. Energy absorption of seat region. Plus water penetration and water absorption resistance.

Temperature Resistance of Sole °C.

The codes indicate that the footwear has met the specified requirements when tested as follows:

200 joule toecap protection. Closed seat region (fully enclosed heel). Antistatic properties. Energy absorption of seat region. Water penetration and water absorption resistance. Plus penetration resistance. Cleated outsole.

Zip

Tested on ceramic tile wetted with dilute solution

200 joule toecap protection. All rubber or all polymeric footwear with antistatic properties. Energy absorption of seat region.

Waterproof

Tested on smooth steel with glycerol

200 joule toecap protection. All rubber or all polymeric footwear with antistatic properties. Energy absorption of seat region. Plus penetration resistance. Cleated outsole.

Anti-Static Sole

Tested under both the above conditions

200 joule toe cap, penetration resistant midsole.

Midsole

200 joule toe cap protection, closed seat region (fully enclosed heel), anti-static properties, energy seat region, penetration resistant midsole.

Footwear products once tested and certified are stamped with the CE mark. The manufacturer also provides user information indicating the applications for which the footwear is suitable.

UNBREAKABLE Footwear Technologies

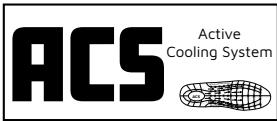

This **UNBREAKABLE** safety footwear uses an anti-penetration midsole from WB Flex Technology by GVT.

The non-metallic textile insert is able to protect the underside of the foot against punctures by using a strong, bonded multilayer complex protective sheet made from high technology materials.

Conforms to EN 12568:2010

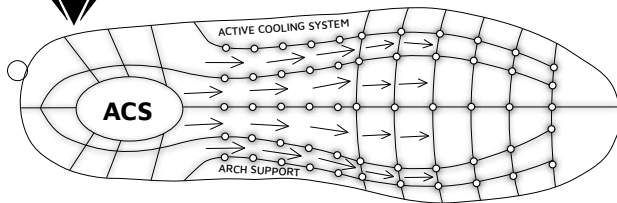

This footwear contains a steel or composite toe cap manufactured to the highest standard and tested in a certified laboratory to meet the European standard EN:12568 2010

Active Cooling System (ACS)

The **UNBREAKABLE** removable PU insock offers a high level of comfort and greater shock absorbancy thanks to its unique moulded heel area.

Each step produces downhill pressure on the comfort designed heel area of the insock. This forces air through the channels and along the underside of the insock and up through the holes to refresh your feet - offering all day comfort!

Look for Active Cooling System icon in the footwear section.

UNBREAKABLE footwear has been manufactured to the highest standards and has been tested and approved in independent laboratories as 'Antistatic' compliant.

UNBREAKABLE safety footwear has antistatic properties with contact resistance in the range between 100K Ohm (10⁵) and 1G Ohm (10⁹).

Reference EN ISO 20345

UNBREAKABLE safety footwear is certified to both CE and UKCA unless advised.

CE marked products are for retail in the UK ONLY until 31st December 2021. From the 1st January 2022 all products entering the UK market need to carry the UKCA mark and have a certification which can only be issued by a UK Approved Body.

All product being supplied to both the UK and EU will need to be dual marked and dual certified.
